

**Target group**

This course teaches the basics of working with the E360 meter. The most important functions and the use of the documentation are explained and knowledge of commissioning, reading, maintenance and communication of the meter is taught.

Participants will be familiar with the basic functions and possible uses of the E360 meter and .MAP110. They will know how to operate the meter using the device buttons and how it can be read out and operated with .MAP110. They are also familiar with the device fronts and the installation diagram.

Requirements

Employees of energy suppliers and other companies involved in metering who would like to learn the functions and operation of the E360 meter and the service software.

The participants understand the contents of the Basic Metering Technology course.

Course content

- Areas of application
- Type designation
- Design and functions
- Display and reading
- Error handling
- Communication
- Security system
- Installation and setup of .MAP 110
- .MAP110 Functions
- OBIS
- Data readout

Course duration

4 hours

Training documentation

E360 course materials

Further information

It is recommended to have .MAP 110 software installed and licensed on your own laptop. If possible, participants should also have access to one meter and optical cable.

Further training

E360 parameterization
