This course provides basic knowledge for all participants who have started working with the E660 meter or would like to work with it. The most important functions are explained and knowledge of installing and commissioning the meter is imparted. In addition, readings and service and maintenance work are carried out on an E660 meter with .MAP110.

Participants will be familiar with the basic functions and possible applications of E660 meters. They will also be familiar with the device fronts, the installation plan and the display menus. They will be able to install and commission the meter and check that it has been installed correctly.

Target group

Employees of utility companies or certification bodies who work in the industrial and commercial metering sector and would like to learn about the functions and handling of the E660 meter.

Requirements

The participants know the contents of the Fundamentals of Metering Technology course.
